

Case Study - Airbus Defence & Space: Astrium

The Problem:

Astrium Satellite Manufacturing must implement a multi-purpose work platform system that must meet strict safety regulations and provide a safe environment for producing satellites. Traditional scaffolding is too heavy, while aluminium towers do not meet their requirements, as each application is different.

The Solution:

LOBO Systems' safe and secure platform product. The unique and patented clamp allows the system to be assembled without tools into any size or shape. This enables Astrium engineers to attach a guardrail at any point on the system. Therefore, personnel are not exposed to the risk of a fall during assembly, thereby meeting the safety rules.

The unique & patented LOBO clamp

The Benefits:

Attaching a guardrail from a lower level before it is needed ensures a safe system is built. This unique versatility of the LOBO System brings a safe working procedure to Astrium.

The LOBO System also brings cost reduction, enhanced efficiency & performance as engineers can build their platforms at any time to satisfy constantly changing requirements.

The LOBO System creates a safe working environment, which increases productivity and maximizes the return on investment.
