

## Case Study - Celanese Acetate Chemicals

### The Problem:

Scaffolding services to chemical plants and pharmaceutical industries may be provided by outsourced companies. At Celanese Acetate Ltd this costs the plant and process management around £ 1m + per Annum.

The managers at Celanese realise that these costs must be reduced to ensure the overall plant viability, but safety cannot be compromised, and aluminium is not preferred on the plant.

### The Solution:

LOBO Systems' safe and secure platform product. The unique and patented clamp allows the system to be quickly assembled without the use of tools to any size or shape. Maintenance engineers can assemble, perform the task and dismantle the LOBO System before traditional scaffolding can be erected.

### The Benefits:

The Managers expect to save significant costs by using the innovative LOBO product. This is because they do not have to rely on outsourced scaffolding companies, as maintenance personnel can assemble the LOBO System. The unique versatility of the LOBO System brings labour cost reduction, enhanced efficiency & performance. The LOBO System creates a safe working environment, which increases productivity and maximizes the return on investment.
