

Case Study - Daily Mail Printing

The LOBO System is a re-configurable work platform product that combines the flexibility and strength of traditional scaffolding with the simplicity and mobility of tower systems. This combination provides a versatile access system that has applications right across Facilities Management and Maintenance.

The Problem:

Office and facilities maintenance requires regular access to elevated areas, which are awkward and therefore difficult to reach; each task is different from the last. Working at height must be accomplished safely and, traditionally, outsourced scaffolding companies and fixed aluminium tower systems have been deployed. Outsourced scaffolding labour is expensive and not available 24 x 7, aluminium frame systems are cumbersome, inflexible, difficult to transport and will not adjust to fit into awkward areas.

The Solution:

The LOBO System can be assembled quickly, easily and safely around or above machinery or restricted access areas – by your in-house maintenance crew. This means out-sourced scaffolding labour costs can be reduced without comprising safety. Areas, previously considered difficult to get to can now be accessed with ease for maintenance and cleaning purposes. In addition, it is available 24/7 and so puts you in control of what and when you schedule your maintenance tasks.
