

Case Study - MillerCoors Brewing.

The Problem:

Scaffolding services to this brewery are provided by an outsourcing company which costs the plant management around \$100k + per year. The managers at Miller realize that these costs have to be reduced to ensure the overall plant efficiency, but safety cannot be compromised at any price.

The Solution:

LOBO Systems' safe and secure platform product. The unique and patented clamp allows the system to be quickly assembled without the use of tools into any size or shape.

Maintenance engineers can assemble, perform the task and dismantle the LOBO System before traditional scaffolding can be erected.

Miller has opted to spend approximately \$6500-00 to perform the maintenance and now own their own LOBO System.

The unique & patented LOBO clamp

The Benefits:

Miller Brewery managers expect to save significant costs by using the innovative LOBO product. This is because they do not have to rely on outsourced scaffolding companies as maintenance personnel can assemble the LOBO System. The unique versatility of the LOBO System brings labour cost reduction, enhanced efficiency & performance. The LOBO System creates a safe working environment, which increases productivity and maximizes the return on investment.
