

Application – On Ship Maintenance

Awkward and Restricted Access

On ship maintenance tasks present many challenges which require solutions.

By their very nature, many vessels have little spare storage capacity and many of the areas requiring maintenance are confined & awkward to access.

Other considerations include making sure maintenance crews have the capability to react quickly to problems with the right equipment and to reduce the overall ship downtime.

This can be accomplished by increasing the amount of pro-active maintenance, crews will discover problems before they become major, expensive or health-damaging events.

LOBO Systems have developed an advanced platform system that has several directly attributable benefits to the shipping industry.

In short: The **LOBO System** is a versatile work platform product that combines the flexibility and strength of traditional scaffolding with the simplicity and mobility of aluminium tower systems. It can be made safely into any shape or size, without the need for any tools and is extremely versatile, therefore fits into extremely awkward to access areas.

The product flat packs making it easy to store and utilize ship-wide. It's easy & quick to erect, versatile and strong.

This simple system can be assembled by anyone, as the components are modular and full training is provided to ensure competency and safety.

TechnipFMC has identified that many of their vessels would benefit by using a LOBO System together with the manufacture certified training course. A pilot scheme was launched to prove the system. Deep Blue and SKV have been supplied with a personalised LOBO System with certified training, face to face online. LOBO can now be applied to many maintenance tasks.

Positive feedback has been received and more online training courses have been booked.

LOBO works great for on ship maintenance and increases safety & reduces labour time.

The ship maintenance crews, once trained, can assemble the LOBO System quickly, easily, and safely around, under or above pipes, bulkheads, plant rooms and specifically in awkward to get to areas.

The LOBO System meets all safety compliances and provides a safer working at height environment.

Also, out-sourced scaffolding labour costs can be reduced without comprising safety. Areas previously considered difficult to get to can now be accessed with ease for maintenance and cleaning purposes.
