

Maintenance Application – Cantilever

Maintenance:

Many areas are difficult to access for routine and emergency maintenance tasks. Traditional scaffolding and aluminium tower systems could be used, but they cannot be quickly or easily assembled to create a safe cantilever. Outsourced scaffolding labour is expensive and not available 24 x 7, aluminium frame systems are cumbersome, inflexible and will not adjust to fit into awkward areas. When not in use, they take up a lot of space and cannot be easily transported around the area to be maintained. They do not meet the industry's day-to-day changing requirements. Regular access to elevated areas is awkward and challenging to reach. Therefore, safety is critical to working at a height that cannot be compromised.

The Solution

The LOBO System configured as a cantilever provides access to otherwise unreachable areas employing an extended platform at the top. LOBO is perfect for accessing machinery, mezzanines, tanks, plant, vessels, storage containers, or anywhere else a fixed and standard access product cannot reach while providing a safe, stable working platform.

45 minutes assembly time for 2 LOBO certified operatives.

The certified LOBO user can custom assemble virtually any size or shape of the cantilever. The LOBO System is a re-configurable work platform product that combines the flexibility and strength of traditional scaffolding with the simplicity and mobility of tower systems. This combination provides a versatile access system with applications across the maintenance industry.

Conformities

EU: BS EN1004-1:2020 & EU: BS EN1004-2:2021 (BS 1139)
USA: OSHA CFR 29 1926 450-454 & subpart L & codified under 29 CFR 1910.27(a).
Canada: CSA Z797-18 and 269.2 -M87
Australia: AS/NZS 1576.1:2010 and AS/NZS 1576.3:2015 Tower

ISO 9001 : 2015
CERTIFIED 213858

The LOBO System, utilising its unique patented clamp, can be reconfigured and adjusted into any shape or size required without the need for tools. Anyone can assemble this simple system, as the components are modular. In addition, LOBO's electroplated steel legs and components can be flat packed when not in use and transported easily for storage or utilisation elsewhere.

Your in-house maintenance crews can assemble the LOBO System quickly, easily and safely around, under or above machinery. To ensure safety, guardrails can be fitted in seconds, at any point in the system and at any stage of the assembly process. As a result, staff should never be exposed to the risk of a fall.

This means outsourced scaffolding labour costs can be reduced without comprising safety. Areas previously considered difficult to access can now be easily accessed for maintenance and cleaning purposes. In addition, as it is available 24 x 7, it lets you control what and when you schedule your maintenance tasks.

Product Benefits

LOBO is scalable, adaptable and adjustable to meet your ongoing and changing requirements. Simply add more components or alter your existing configuration to satisfy the demands of the next task. Protect your initial investment with a product that will safely meet all your access needs.

LOBO is a rigid and stable product which meets or exceeds current safety regulations.

LOBO Towerstore

The Towerstore offers security on or off-site. In addition, the Towerstore provides a secure yet simple way to store your LOBO components, making managing all the components much more uncomplicated.

It is explicitly designed for LOBO’s advanced work platform system, so it is fitted with feet for easy pallet truck or forklift manoeuvrability. Also, it can be locked with a padlock for security or storage. The Towerstore can be vertically or horizontally mounted to suit the workshop or transported for rapid deployment, on and off-site.

LOBO’s electroplated steel structure ensures many years of product life and a system that will not shake or rattle.

The system’s modular approach means components are fully integrated and can be hand-carried.

Fully constructed systems can also be made mobile by the addition of wheels.

Cost Benefits

Experience shows that deploying the LOBO system reduces the costs of hiring scaffolding and constructing bespoke fixed access systems. By reducing your reliance on outsourced scaffolding and engineering companies, cost savings will be achieved – easily within 12 months.

With this quantifiable cost reduction comes the added savings associated with reduced downtime and greater productivity from your maintenance department.

Available 24 x 7, quick to erect, and above all, safe. It is immediately adjustable for your next job with no staff waiting time while new fixed-frame structures are built or scaffolders return and re-assemble a new configuration.

Re-configurable, again and again, this product comes with no disposal costs and minimal replacement and ongoing training costs.
